

PSYCHOLOGY.ME FOR PRACTITIONERS

One private platform for your whole assessment practice.

Organise, select, deliver, monitor, report, release and track change,
with every record kept confidential.

For coaches, organisational psychologists, HR consultants, career counsellors, therapists and counsellors.

CONTENTS

- 01 The platform at a glance

- 02 Organise clients and records

- 03 Select instruments and batteries

- 04 Deliver under your brand

- 05 Monitor progress and reminders

- 06 Norm-referenced reports

- 07 Release to the client

- 08 Track change over time

- 09 Running the practice

- 10 Privacy and data protection

- 11 What each plan includes

- 12 Who built it, and how to start

This brochure describes the platform as of October 2026. Current plans and prices are on psychology.me/for-practitioners.

01

The platform at a glance.

Psychology.me for Practitioners is one workspace for the whole assessment cycle. You keep your clients, instruments and reports in one place, and every step of the work is connected to the next: what you send is what you monitor, what the client completes becomes your report, and what you release is what the client sees.

One workflow

Organise, select, deliver, monitor, report, release, track change and administer, in that order and in one place.

Validated instruments

Published instruments with documented reliability, scored against reference norms, never free online quizzes.

Your brand, your decision

Clients see your logo, and see their results only when you release them.

Confidential by design

Each practice's records are kept apart, stored in Amsterdam and encrypted. Sensitive actions are logged.

02

Organise: clients, records and notes.

Every client has one record. Everything that happens with that client, from the first invitation to the latest report, is kept in it.

Client records

Each client record holds every assessment sent, its status, its report and its release state.

Private notes

Notes on a client are visible to your practice only and are never shown to the client. Editing a note is recorded in the audit log.

Groups

Put clients into groups for a cohort, a team or a programme, then read and export the group as a whole.

03

Select: the right instruments for each client.

The catalogue covers personality, reasoning, values and motivation, career interests, work styles, skills, self-beliefs, self-regulation, social and emotional skills, well-being and mental health screeners.

Batteries

Combine instruments into a battery once and send it again to every client it fits. A battery of three instruments counts as three assessments.

Change tracking marked

Instruments that support reliable-change comparison are marked, so you know before you send which ones can show change at re-test.

Languages

English, and Montenegrin for the instruments available in that language.

PERSONALITY

- HEXACO Personality Test
- HEXACO Personality Test (100 items)
- Big Five Personality Test (10 items)
- Big Five Personality Test (120 items)
- HEXACO Personality Test (24 items)
- Big Five Personality Test (50 items)
- Big Five Personality Test (300 items)

VALUES & MOTIVATION

- Human Values Survey

CAREER & WORK

- Holland Code (RIASEC) Career Test

SELF-REGULATION

- Self-Control Test
- Coping Styles

WORK STYLES

- Personal Integrity Test

SELF-BELIEFS

- Self-Efficacy Test
- Self-Esteem Scale (Rosenberg)

THINKING STYLES

- Intellectual Curiosity Test

MENTAL HEALTH SCREENERS

- Depression Screener (PHQ-9)
- Anxiety Screener (GAD-7)
- Adult ADHD Screener (ASRS)

SOCIAL & EMOTIONAL SKILLS

- Emotional Intelligence
- Cultural Intelligence

WELL-BEING

- Well-Being Index (WHO-5)
- Life Satisfaction (SWLS)
- Perceived Stress Scale (PSS-10)
- Burnout Assessment (CBI)
- Brief Resilience Scale
- Perceived Social Support (MSPSS)

REASONING

- Abstract Reasoning
- Spatial Reasoning
- Logical Reasoning
- Verbal Reasoning
- Brief IQ Test

SKILLS

- Generative AI Competence Assessment

• Change tracking available. The others are one-off assessments.

04

Deliver: one branded link, no client account.

The client receives one link, completes the assessment in the browser and closes the tab. There is nothing to install and no account to create.

Single instruments or batteries

Send one instrument or a whole battery through the same link.

Your brand

Your logo on every page the client sees.

Your colours

Your own colour palette on client pages as well as your logo.

Your consent text

Set your own consent text. When it is set, the client accepts it before starting.

05

Monitor: know who has finished.

You see the state of every assessment you have sent, for every client, without chasing anyone by hand.

Status at a glance

Invited, in progress or completed, for each client and each instrument.

Reminders

Send a reminder to a client who has not finished, or switch on automatic reminders. Nothing is sent to a client unless you choose it.

Scheduled re-assessments

Schedule the next assessment in advance, for a number of weeks ahead or a date, and send or cancel it at any time.

06

Report: read it first, with its uncertainty.

Your report is ready the moment the client submits. It shows what the instrument can support, and no more: a score carries its confidence band wherever reliability is on record.

Practitioner report

Scale scores with confidence bands and the position against the reference norms.

Cross-instrument profile

The latest score and band on every scale across all of a client's instruments, in one view.

No AI-written interpretation

Scores, norms and verdicts come from the instrument's published statistics, not from a language model.

07

Release: the client sees it when you decide.

Nothing is visible to the client until you release it, unless you choose automatic release.

Client page

Plain-language results under your brand, which the client can also save as a PDF.

Decision support

Screeners support the judgement of a qualified professional. They do not replace it.

Release and withdraw

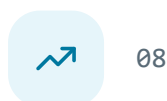

Release a result when you are ready, and withdraw it again at any time. Both are recorded in the audit log.

Optional email

On release, the client can be sent the link to their page by email.

Crisis pathway

Where the depression screener calls for it, the client is shown help resources.

08

Track change: change you can defend.

A felt improvement may be real, or it may sit inside the measurement error of the instrument. The platform tells you which before anything is called a change.

Reliable change (Jacobson-Truax)

The difference between two time points is tested against the instrument's own measurement error. The verdict reads improvement, decline or no reliable change.

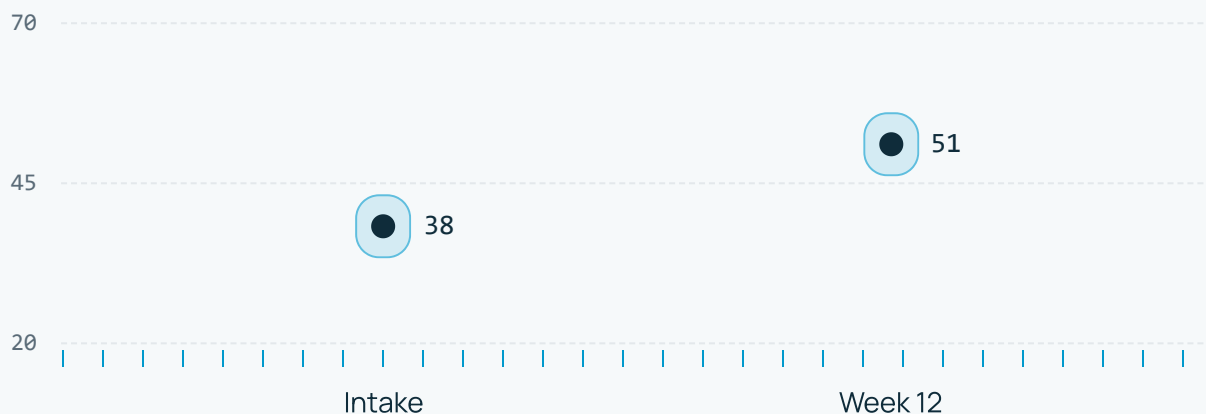

Trajectories

Every time point for a client on one chart, with each score in its confidence band.

Clinically significant change

For the depression and anxiety screeners, the report also states whether the client crossed the published threshold, not only whether the score moved.

DEMO CLIENT, SELF-EFFICACY TEST

- **Reliable improvement**

The change exceeds the instrument's measurement error (Jacobson-Truax).

09

Administer: running the practice.

The same records that serve each client also serve the practice, from billing to everything your plan adds.

Group outcome reports

An outcome report for a whole group, on screen and as a PDF.

CSV export

Export a group's results for your own or your client organisation's reporting.

Cohort benchmarking

Compare a group's results with the instrument's reference norms, with the strength of that reference stated.

Your team

Invite colleagues to the practice under their own logins, as owners or members. A practice always keeps at least one active owner.

Billing

Monthly billing through Stripe, with invoices in one place. Cancel from your billing page.

10

Privacy: confidential at every step.

You decide who sees what. The platform is built so that the default is privacy.

Kept apart

Each practice's records are kept separate from every other practice's.

Never for advertising

Client data is never used for advertising.

Organisation report

For the Generative AI Competence Assessment, one report on the whole organisation, including what followed each assessment.

Usage analytics

How your included assessments are being used, broken down across the practice.

Where and how

Client data is stored on servers in Amsterdam, in the Netherlands, encrypted at rest and in transit.

Audit log

Sensitive actions, such as releasing and withdrawing results, editing notes and changing consent text, are recorded for your practice.

Retention you set

Choose how long inactive client records keep their identifying details. After that, names and notes are removed automatically and only de-identified scores remain. It is off unless you switch it on.

One exception, disclosed

In the Generative AI Competence Assessment, the text of a single written answer is scored by OpenAI, without the client's name or email.

11

Plans: what each one includes.

Every plan includes branded links, the practitioner report and release control. The table shows what each plan adds.

What counts as an assessment

One instrument completed by one client. A battery of three instruments counts as three.

Changing plan

Change plan at any time. An upgrade is charged pro rata straight away; a downgrade is credited against later invoices.

Cancelling

Once the subscription ends you can no longer send new assessments. Your client records are not deleted, and they are there if you subscribe again.

Feature	Starter	Professional	Practice
Assessments included each month	20	50	150, pooled
Practitioners	1	1	Up to 10
Instruments	Any 3 instruments	Full catalogue	Full catalogue
